

## File manager (FM) functions

```
def append_data_to_file(data):
    """Appends data to a pickle file.

    Args:
        - data (obj): Data to be appended to the file
    """
    file_path="data.pkl"

    # Create new file and write data
    with open(file_path, 'wb') as file:
        pickle.dump(data, file)

def load_from_pickle_file(filename="data.pkl"):
    """Loads data from a pickle file and returns it. If file does not exist, returns None.

    Args:
        - filename (str): Name of the file to be loaded

    Returns:
        - obj: Data loaded from the file, or None if file does not exist
    """
    if os.path.isfile(filename):
        with open(filename, 'rb') as f:
            obj = pickle.load(f)
        return obj
    else:
        return None
```
